Scripty

Your AI script supervisor.

Continuity memory and monitoring for AI-generated stories.

01 / THE NAME

On set, the script supervisor - the “scripty” - tracks the details that keep separate shots continuous. Scripty brings that production habit to AI images: inspect the shot, retain the correction, carry it into the next scene.

Always Scripty. Pronounced “script-ee.”

02 / THE MARK

A restrained wordmark with a capital S. A frame corner and a production-note tick suggest a shot and a retained decision. Keep the identity quieter than the footage. The mark above is a concept direction.

03 / THE VOICE

An attentive production colleague: calm, specific, economical. Explain what the evidence supports; name uncertainty clearly.

“Ring observed on the left hand; expected right.”
“Hand occluded; unable to verify.”
“Correction saved to Scripty Memory.”

Distinguish live calls, recorded playback, local replay edits, and draft labels. Learned project memory does not imply model retraining or guaranteed consistency.

04 / THE PALETTE

Background `#0B0B0D`	**Surface** `#141418`	**Raised** `#1C1C22`
Border `#2A2A33`	**Text** `#EDEDF0`	**Muted** `#8A8A96`
Drift `#E5484D`	**Pass** `#3DD68C`	**Memory** `#F5C451`

Red flags drift. Green marks a passed check. Gold marks retained memory. Pair every color with text or an icon.

05 / TYPE + INTERACTION

Geist Sans for interface text.
Geist Mono for confidence, counts, and traces. Align numbers and keep labels legible.

A filmstrip keeps shots central, beside the reference, memory, and inspector. Use a thin red flag frame and a brief gold arrival for a learned rule.

Motion below 250ms, reduced-motion support, visible focus, keyboard review, and stacked panes on narrow screens.

CHECK THE SHOT. KEEP THE CORRECTION. CARRY IT FORWARD.

Scripty. Keep the story straight.

Describe measured results as observed. Treat less rework and better continuity as goals until verified.
